

ALEX FAU RIDAO

Data Engineer | Analytics Engineer | Azure · Databricks · PySpark · SQL

Sabadell, Barcelona | afau2000@gmail.com | +34 609 872 116

Portfolio: afau-r.github.io/portfolio-web/ | LinkedIn: linkedin.com/in/alex-fau-ridao

PROFILE SUMMARY

Data Engineer / Analytics Engineer specialized in designing and deploying scalable data pipelines and architectures on **Azure Databricks**, using **PySpark** and SQL as core tools to turn raw data into reliable, business-ready assets. Experience across the full data lifecycle in cloud environments: ingestion, transformation, modeling, orchestration, quality control, and end-to-end traceability through to consumption in Power BI. Focused on building reusable, efficient, well-documented data logic, with the ability to extend that work into advanced analytics and predictive modeling. Interested in data engineering roles where architectural robustness and pipeline quality form the foundation of business analysis.

PROFESSIONAL EXPERIENCE

Analytics Engineer | Mango

June 2025 – Present | Barcelona, Spain

- Built automated end-to-end data pipelines on **Azure Databricks**, orchestrating ingestion, transformation with **PySpark** and SQL, and publication to Power BI, ensuring traceability, data quality, and availability for business teams.
- Designed and deployed an analytical framework in Databricks (SQL + PySpark) to standardize online availability metrics, replacing a static stock-based measure with perceived customer availability at company-wide scale.
- Defined reusable data logic and metrics at the pipeline level to ensure consistency and efficiency across recurring analysis for multiple teams.
- Developed a data-driven multi-channel attribution model on top of the data layer built in Databricks, to support commercial and marketing decision-making.

Audit Junior | Ernst & Young (EY)

November 2023 – August 2024 | Barcelona, Spain

- Processed and analyzed large financial datasets for multinational companies to support audit validation and control checks.
- Built scripts to automate repetitive data tasks, improving analysis efficiency and reducing manual processing time.

DATA PROJECTS

Demand Forecasting and Inventory Optimization | Cruzber

- Built time-series forecasting pipelines in Python (Prophet, SARIMA, MLForecast, LGBMRegressor) to improve prediction accuracy and reduce immobilized stock in a real business context.

Customer Segmentation and Profitability Analysis

- Applied K-Means clustering and RFM segmentation to identify distinct customer groups and behavioral patterns.
- Calculated Customer Lifetime Value (CLV) and Customer Acquisition Cost (CAC) to evaluate segment profitability and guide business decisions.

Churn Prediction and Talent Retention

- Built and evaluated a Random Forest classification model to identify employees at high risk of turnover.
- Interpreted model outputs and feature importance to deliver actionable retention insights for decision support.

TECHNICAL SKILLS

- Data Platforms and Cloud:** Azure, Azure Databricks, Google Cloud Platform (BigQuery), Git.
- Large-Scale Data Processing:** PySpark / Apache Spark, SQL, distributed pipeline design, job optimization.
- Data Engineering:** ETL/ELT pipeline architecture, data modeling, orchestration, data quality and control, end-to-end traceability, reusable metric definitions.
- Programming Languages:** Python, SQL, PySpark.
- Business Intelligence:** Power BI, Tableau.
- Data Science and Machine Learning:** predictive modeling, regression, classification, clustering, time series forecasting, feature engineering, RFM analysis.
- AI and LLM Tooling:** LLM-based agent development (Claude, GPT), MCP (Model Context Protocol) integrations, prompt engineering, AI workflow automation, agentic pipelines for data and operational tasks.
- Python Libraries:** Pandas, NumPy, Scikit-learn, Statsmodels, MLForecast, Matplotlib, Seaborn, GeoPandas.

EDUCATION

- Master's in Data Analysis and Artificial Intelligence** (2024 – 2025) | ISDI Digital Group
- Bachelor in Economics, minor in Statistics, Econometrics and Quantitative Economics** (2019 – 2023) | Universitat Autònoma de Barcelona

LANGUAGES

Catalan (Native) | Spanish (Native) | English (B2 – Upper Intermediate)
