

ALEX FAU RIDAO

Data Engineer | Analytics Engineer | SQL · Cloud · Databricks · PySpark · dbt · Snowflake

Sabadell, Barcelona | afau2000@gmail.com | +34 609 872 116

Portfolio: afau-r.github.io/portfolio-web/ | LinkedIn: linkedin.com/in/alex-fau-ridao

PROFILE SUMMARY

Data Engineer / Analytics Engineer specialized in designing and deploying scalable data pipelines and architectures in Cloud environments, using **Databricks**, **PySpark**, and SQL as core tools to turn raw data into reliable, business-ready assets. Experience across the full data lifecycle: ingestion, transformation, modeling, orchestration, quality control, and end-to-end traceability through to consumption in Power BI, with direct exposure to modern stacks like dbt and Snowflake. Focused on building reusable, efficient, well-documented data logic, with the ability to extend that work into advanced analytics.

PROFESSIONAL EXPERIENCE

Analytics Engineer | Mango

June 2025 – Present | Barcelona, Spain

- Designed and deployed an online availability system in **Databricks** (SQL + PySpark) replacing static stock metrics with customer-perceived availability, including a dedicated KPI built for the logistics team.
- Built a data-driven multichannel attribution pipeline (Markov chains, First/Last Touch, Linear, Time Decay), **audited and validated by Deloitte**, to support commercial and marketing decisions.
- Collaborated with the Data Engineering team on building the end-to-end flow: GA4 browsing data exported to BigQuery, ingested into the datalake, modeled in **dbt** (versioned in Git), with an aggregated layer in **Snowflake** feeding Looker dashboards.

Audit Data Analytics | Ernst & Young (EY)

November 2023 – August 2024 | Barcelona, Spain

- Extracted, cleaned, and transformed data for multinational clients (SQL, Power Query) and modeled fact/dimension tables for consumption in Power BI.
- Built and maintained Power BI dashboards and KPIs (DAX), running reconciliations and quality checks to ensure figures matched source data.

DATA PROJECTS

GainzTracker — Full-Stack Fitness App

- Designed and deployed the backend and database (FastAPI + Supabase/PostgreSQL), handling data modeling, server-side logic, and progress reporting for users.
- Built a data-driven coaching engine that calculates personalized metrics (RPE, e1RM) from workout history.

Demand Forecasting and Inventory Optimization | Cruzber

- Built time-series forecasting pipelines in Python (Prophet, SARIMA, MLForecast, LGBMRegressor) to improve prediction accuracy and reduce immobilized stock in a real business context.

TECHNICAL SKILLS

- Data Platforms and Cloud:** Azure, Azure Databricks, Snowflake, Google Cloud Platform (BigQuery), Git.
- Data Engineering and Pipelines:** PySpark / Apache Spark, SQL, dbt, ETL/ELT architecture, orchestration, data modeling (fact/dimension tables), data quality and end-to-end traceability.
- BI and Reporting:** Power BI (DAX, semantic models), Tableau, Looker, Google Analytics 4.
- Programming Languages:** Python, SQL, PySpark.
- Data Science and Forecasting:** predictive modeling, clustering, time series forecasting, regression, classification, feature engineering, RFM analysis.
- Python Libraries:** Pandas, NumPy, Scikit-learn, Statsmodels, MLForecast, Matplotlib, Seaborn.

EDUCATION

- Master's in Data Analysis and Artificial Intelligence** (2024 – 2025) | ISDI Digital Group
- Bachelor in Economics, minor in Statistics, Econometrics and Quantitative Economics** (2019 – 2023) | Universitat Autònoma de Barcelona
